

PanCareFollowUp

- Today, more than 80% of children and adolescents treated for cancer will become long-term survivors.
- There are over 300,000 survivors across Europe, and this number is growing.
- Survivorship may come at a price: treatment can have long-term side effects.
- These long-term side effects (late effects) can impact health and quality of life.
- That is why survivors require closer health monitoring than the average population.
- PanCareFollowUp is an EU-funded project looking at how to best deliver survivorship care to survivors of childhood and adolescent cancer in Europe.**
